

This chart represents a generalized description of Trantham's grazing system. It is constantly changing as a result of climate/weather and discovery of new varieties. This should be used ONLY AS A GUIDE as you develop the system and crop mix that is best suited to your particular farm and location.

Trantham's 12 Aprils Dairy: Planting and Grazing Guide

⏏ = begin grazing
 ┌─── = crop maturity phase
 X = mowing / baling for dry cows

**Cool season Florida black ryegrass and Wrens Abruzzi are generally grazed into February and are usually not mowed or baled. Other fall/winter crops: Athens rye (plant late Sep-early Oct), and Yuchi clover + rye + ryegrass mix (plant mid-Nov)
