

SARE: Advancing the Frontier of Sustainable Agriculture in...

Minnesota

Project Highlight: *Cutting edge research to help bees help themselves*

Diseases, pests and the mysterious phenomenon of colony collapse disorder pose a dire threat to the U.S. beekeeping industry and, in turn, to the \$20-billion-a-year crop industry that relies on insect pollination.

As researchers across the country scramble to find solutions, University of Minnesota Entomologist Marla Spivak is advancing effective strategies that help bees help themselves. Supported by six SARE grants since 1997, Spivak is showing beekeepers how to identify and breed for hygienic bees—bees that are adept at spotting immature infected bees and quickly removing them from the nest before a disease or pest can get out of control in a colony.

While the exact cause of colony collapse disorder is unknown, researchers believe it to be the result of a com-

bination of factors, one of which is the *Varroa destructor* (*V. destructor*) mite, a pest introduced to the country in the late 1980s. *V. destructor*, difficult to control because it has become pesticide resistant, attacks bees by sucking their blood, thus spreading viruses among colonies and weakening individual bees, making them susceptible to pesticides not intended to harm them.

In addition to her work with hygienic bees, Spivak helps large-scale beekeepers in Minnesota and around the country adopt the sustainable pest management strategies that make sense for them, including breeding and sampling strategies.

For more information on these projects, see www.sare.org/projects, and conduct a coordinator-name search for “Spivak.”

SARE in Minnesota

www.sare.org/state-summaries

SARE's four regional programs and outreach office work to advance sustainable innovations to the whole of American agriculture.

What is SARE?

Since 1988, the Sustainable Agriculture Research & Education (SARE) program has been the go-to USDA grants and outreach program for farmers, ranchers, researchers and educators who want to develop innovations that improve farm profitability, protect water and land, and revitalize communities. To date, SARE has awarded \$245 million for more than 6,100 initiatives.

SARE is grassroots with far-reaching impact

Four regional councils of expert practitioners set priorities and make grants in every state and island protectorate.

SARE communicates results

SARE shares project results by requiring grantees to conduct outreach and grower engagement; and by maintaining the SARE Learning Center—a library of practical publications, grantee-produced information products and other educational materials.

SARE Grants in Minnesota

SARE has awarded a total of **257 grants** in Minnesota since 1988

SARE's Impact

53 percent of producers report using a new production technique after reading a SARE publication.

79 percent of producers said they improved soil quality through their SARE project.

64 percent of producers said their SARE project helped them achieve higher sales.

Contact Your SARE State Coordinator

SARE sustainable ag coordinators run state-level educational programs for Extension and other ag professionals, and many help grant applicants and recipients with planning and outreach. Visit www.northcentralsare.org/minnesota to learn more.
