

# SARE: Advancing the Frontier of Sustainable Agriculture in...

# Illinois

## What is SARE?

Since 1988, the Sustainable Agriculture Research & Education (SARE) program has been the go-to USDA grants and outreach program for farmers, ranchers, researchers and educators who want to develop innovations that improve farm profitability, protect water and land, and revitalize communities. To date, SARE has awarded over \$273 million to more than 6,800 initiatives.

### SARE is grassroots with far-reaching impact

Four regional councils of expert practitioners set priorities and make grants in every state and island protectorate.

### SARE communicates results

SARE shares project results by requiring grantees to conduct outreach and grower engagement; and by maintaining the SARE Learning Center—a library of practical publications, grantee-produced information products and other educational materials.

## Project Highlight: *Utilizing Precision Application of Cover Crops to Maximize Benefits to Corn*

Over the 20 years that Ralph Upton has planted cover crops on his Illinois farm, he has built up the health of his soil and reduced his need for fertilizers and pesticides on his corn and soybean crops. However, he knows they can still do more. Allowing the cover crop to develop biomass and roots right up to spring planting would yield even more benefits, but for Upton, who practices no-till, planting corn into the heavy green residue can be difficult.

So, he used a SARE grant to experiment with building a precision, multi-cover crop species seeder and partnered with local educators and researchers to test it. The advantage of such a precision seeder would be the ability to plant a mix of cover crop species at one time,

but to place some species within corn rows and others between rows. The species that develop heavier residue would go between rows, hopefully making it easier to plant again the following year.

Upton found that precision-planted cover crops are effective and maintained his corn yields. His work prompted interest among Illinois farmers and crop advisors. This precision-planting system could allow for a more flexible transition from a conventional tillage system to a no-till cover crop system, according to Upton.

For more information on this project, see [www.sare.org/projects](http://www.sare.org/projects), and search for project number FNC15-1018.

## SARE in Illinois

[www.northcentralsare.org/illinois](http://www.northcentralsare.org/illinois)

**\$2.6 million in total funding**

**122 grant projects**

(since 1988)

For a complete list of grant projects state by state, go to

[www.sare.org/state-summaries](http://www.sare.org/state-summaries)

SARE's four regional programs and outreach office work to advance sustainable innovations to the whole of American agriculture.

# SARE Grants in Illinois

SARE has awarded a total of **122 grants** in Illinois since 1988

## SARE's Impact

**53 percent** of producers report using a new production technique after reading a SARE publication.

**79 percent** of producers said they improved soil quality through their SARE project.

**64 percent** of producers said their SARE project helped them achieve higher sales.

## Contact Your SARE State Coordinator

SARE sustainable ag coordinators run state-level educational programs for Extension and other ag professionals, and many help grant applicants and recipients with planning and outreach. Visit [www.northcentralsare.org/illinois](http://www.northcentralsare.org/illinois) to learn more.
